Temperature Converter:

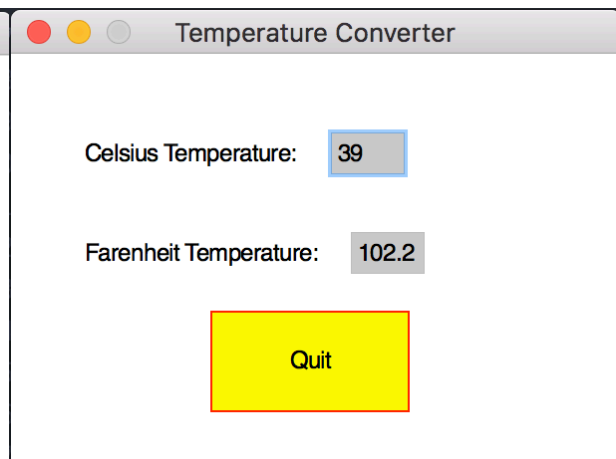

A window titled "Temperature Converter" with a standard macOS title bar (red, yellow, and grey buttons). The window contains two text input fields: "Celsius Temperature:" and "Fahrenheit Temperature:". Both fields are currently empty. Below these fields is a yellow button with a red border labeled "Convert It".

Celsius to Fahrenheit:

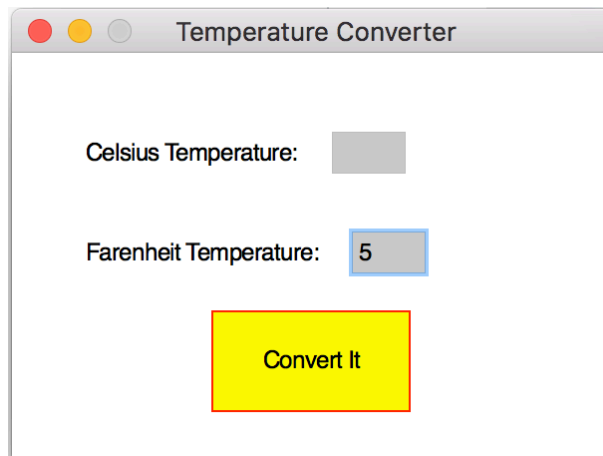

The "Temperature Converter" window with "Celsius Temperature:" set to "39" (highlighted with a blue selection box) and "Fahrenheit Temperature:" empty. The "Convert It" button is visible.

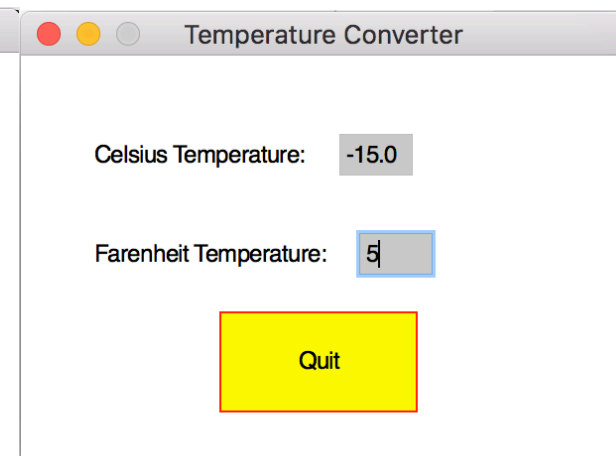

The "Temperature Converter" window with "Celsius Temperature:" set to "39" (highlighted with a blue selection box) and "Fahrenheit Temperature:" set to "102.2". The "Convert It" button has been replaced by a yellow button with a red border labeled "Quit".

Fahrenheit to Celsius:

The "Temperature Converter" window with "Celsius Temperature:" empty and "Fahrenheit Temperature:" set to "5" (highlighted with a blue selection box). The "Convert It" button is visible.

The "Temperature Converter" window with "Celsius Temperature:" set to "-15.0" and "Fahrenheit Temperature:" set to "5" (highlighted with a blue selection box). The "Convert It" button has been replaced by a yellow button with a red border labeled "Quit".
